(a) Collapse on EW (raw scale)
fraction on trivial branch ($y_i = x_i$)
iteration t
A
B
C
uniform prior
Dirichlet(1) prior
(b) Ranking quality along iterations
mean Spearman ρ
calibrated rule [4]
EW, raw
EW, excess $\gamma = 16$
C on raw P
iteration t
(c) The self-consistent point repels
spectral radius
$\rho(J_A) = \lambda$
$\rho(J_B) = -\lambda^2 + 3\lambda - 1$
measured
stability threshold
Perron root λ of $T = \lambda W$
(d) Realization C: Lehmer mean
$L_2(x, S)/x$
fixed point below prior
prior level
minimum at $S = (\sqrt{2} - 1)x$
neighbour signal S/x
