(a) Accuracy vs cost, $n = 100$
mean Spearman ρ
wall clock (ms)
scalar oracle
MC-1000
MC-200
rule + $\alpha = 0.9$ on P
rule + C on P
rule + AP polish
rule
AP($\eta = 1$)
MC-50
KNZ MP
(b) Accuracy vs cost, $n = 900$
mean Spearman ρ
wall clock (ms)
MC-1000
rule + $\alpha = 0.9$ on P
scalar oracle
rule + C on P
MC-200
AP($\eta = 1$)
rule + AP polish
rule
MC-50
EW diffusions
rule + raw-P ensemble
batched Monte Carlo
KNZ MP
(c) Wall clock vs size
wall clock (ms)
number of vertices n
rule + raw-P ensemble
MC-50
MC-200
MC-1000
(d) Ensemble vs equal-budget Monte Carlo
$\rho_{\text{ens}} - \rho_{\text{MC}}$ at equal cost
number of vertices n
